

About Riskmeter.com

For property underwriters and agents who are looking to increase accuracy, productivity and overall speed of operations, the RiskMeter Online is an Internet application used to automate property risk reports. By simply typing in an address, you can get back natural hazard information for a given policy location. The RiskMeter can perform more than 30 different lookups, including distance to coast, rating territory, flood zone, windpool eligibility, proximity to brush and EQ hazards. Unlike conventional paper-based lookups, the RiskMeter Online provides you with accurate, efficient and defensible positions up to 90% faster than existing methodologies. Now by using RiskMeter Web Services you can automatically retrieve this data into your application for straight-through-processing.

RiskMeter Web Services

A major pain point for underwriters and agents is the amount of redundant data entry that's required to quote and bind new and existing business. In order to survive and thrive in today's competitive property & casualty insurance industry, it's imperative to reduce the amount of redundant data entry for agents and underwriters.

With RiskMeter's Web Services, it's possible to automatically transfer our natural hazard data into your in-house or 3rd party quoting and underwriting applications. These data elements can be used to automatically enforce underwriting guidelines and eliminate redundant data entry.

Various studies have shown agents will steer business to carriers that enable them to easily and quickly price and place business. These same studies have also shown that carriers, who have automated the underwriting process, are more likely to recruit and retain top underwriting talent.

Make Straight-Through-Processing a Reality!

Over the years we've helped over 100 customers integrate RiskMeter Online Web Services into their systems. In order to make this process as seamless as possible, RiskMeter will provide you with all of the tools and resources that you need. First, you will have access to our support portal (support.riskmeter.com). In this site you will find general help, programming documentation, an XML string builder and much more! In addition, we will give you access to one of our talented and experienced consultants. Our consultants will be with you every step of the way to answer any questions and provide you with feedback on design and implementation.

Benefits of Web Services:

- Increase ease of doing business by using validated data
- Enable agents to sell more
- Allow underwriters to focus on hard to place business
- Increase market share and cut operating costs
- Reduce the time it takes to quote and bind business
- Enforce underwriting guidelines and moratoriums
- Eliminate searching for 3rd party data
- Enhance service and delivery
- Attract and retain profitable producers
