**RiskMeter Adds Aggregate and Exposure Management Features to its
Natural Hazard Risk Report Service**

Boston, MA, June 2006 - CDS Business Mapping, LLC., a leader in online property risk mapping, today announced it has added an aggregate exposure module to its RiskMeter Online (www.RiskMeter.com) service. This cutting-edge model will allow users to view, identify and manage their aggregate exposures.

“Going into the 2004 and 2005 hurricane seasons, many insurers thought they had a pretty good idea of what their losses might be,” explains Dan Munson, VP of Sales & Marketing, CDS Business Mapping. “Unfortunately, in many cases, the catastrophe models they used provided loss estimates that were way off. As a result, many companies are putting more emphasis on exposure management. In this way, they are managing the total amount of coverage offered in specific regions,” Munson said.

In order to help insurers to manage their exposure more effectively, CDS added aggregate capabilities to the RiskMeter Online. Some of the features of this model include the ability to:

- ◆ Review what’s been written in a particular area by submitting an address
- ◆ Monitor areas of special concern (coastal areas, around terror targets, etc.)
- ◆ Set exposure limits for specific areas
- ◆ Review all policies that fall into a pre-defined region or radius
- ◆ Run natural hazard risk reports

“After the events of the 2005 hurricane season, many insurers implemented stringent exposure limits,” explains Munson. “In order to effectively enforce these guidelines, underwriters need the ability to monitor risk concentrations and their total value, as well as have the ability to get real-time, natural hazard risk reports for new business. With the RiskMeter Online’s new aggregate mapping capabilities and more than 30 natural hazard risk reports, this is now possible.” For more information on the new CDS aggregate model, please contact Daniel Munson at 617.737.4444 or dmunson@cdsys.com

About RiskMeter.com

For property underwriters and agents who are looking to increase accuracy, productivity and overall speed of operations, the RiskMeter Online (www.RiskMeter.com) is an Internet application used to automate property risk reports. By simply typing in an address, users can get back natural hazard information for a given policy location. The RiskMeter can perform more than 30 different lookups, including distance to coast, rating territory, flood zone, windpool eligibility, proximity to brush and EQ hazards. Unlike conventional paper-based lookups, the RiskMeter Online provides you with accurate, efficient and defensible positions up to 90% faster than existing methodologies. For more information, please visit www.RiskMeter.com or call 1.800.746.7797

About CDS Business Mapping

CDS Business Mapping, LLC., was founded in 1994 as a desktop mapping sales and consulting company. CDS is dedicated exclusively to the creation and implementation of mapping solutions using GIS (Geographic Information Systems) technology. In addition, CDS provides a full line of mapping software, mapplication development services,

Internet mapping development, training and consulting. Based upon client requirements, CDS can provide on-site consulting, customize software for particular applications, or create custom maps on a service basis. For more information, please visit
